Stock Ownership

A typical household has the following characteristics of its stock ownership profile:

1. 60% of households own stocks and
2. 10% of households own more than 10% of their net worth in stocks.

Future Dispositions

1. 57% of households believe that the market will be higher in 1997 than it is today.
2. 30% of households believe that the market will be lower in 1997 than it is today.

One of the most contentious issues regarding stocks and other financial instruments has been the allocation of these assets by households. It has been accomplished for 1992 U.S. data by Kennickell, McManus, and Wood.

3. 44% of households own stocks and other financial instruments.

4. 10% of households own more than 10% of their net worth in stocks and other financial instruments.

5. 57% of households believe that the market will be higher in 1997 than it is today.

6. 10% of households own more than 10% of their net worth in stocks and other financial instruments.

Future Dispositions

7. 30% of households believe that the market will be lower in 1997 than it is today.

8. 30% of households believe that the market will be lower in 1997 than it is today.
